

FRLs (cont.)339 - 344

Watts.....	339 - 344
Filters	339
Regulators	340 - 341
Lubricators.....	342
Combination units.....	343
Accessories and repair kits	343 - 344

Gauges345 - 354

Dry	345 - 348
Process.....	347
Panel builder.....	349
Contractor pressure.....	349
Compound	350
Vacuum.....	350
Liquid filled	351 - 353
Welding.....	353
Digital.....	354
180° steam gauge siphons.....	354

Thermometers355 - 356

Bi-metal.....	355 - 356
Magnetic surface mount	356
Threaded thermowell	356

⚠ WARNING

The constant vibration created by air tools, like air drills and pavement breakers, is destructive to air hose couplings, especially the quick-acting type. To provide protection against coupling breakage and related hazards, Dixon® recommends the use of a whip hose. To construct a whip hose, connect one end of a short (3' to 10') air hose to the air tool using a 3500 type steel nipple. Connect the other end of the hose to the air supply using the standard quick-acting coupling. The heat-treated 3500 nipple will withstand vibration far better than the standard coupling and provide a safer connection. The whip hose should remain permanently connected to the tool.
